**Subject:** Clean up our toxic river

Dear Administrator Gina McCarthy,

The draft cleanup plan for the Portland Harbor Superfund Site must be revised so that both people and wildlife can enjoy a clean healthy river. The Willamette runs through the center of our city and is a home to range of wildlife including Ospreys, Bald Eagles, Otters, Great Blue Herons, many species of fish and more. Right now, it is not safe for a healthy adult person to eat more than eight ounces of fish per month from the Willamette River Superfund area.

Why deny the natural symbol of America a healthy place to live?

For pregnant or nursing women, no amount of resident fish is considered safe. More cleanup means more safety. We need a plan from the EPA that relies less on Monitored Natural Recovery, and focuses on removing contaminated sediment and taking that sediment to an appropriate landfill. Put garbage where it belongs.

I am asking you to make the following improvements:

1. EPA should select Alternative G with additional dredging in areas of high human use, areas of high ecological value, and areas where there is high risk of re-contamination of the river.
2. EPA should set much clearer timelines and metrics for success including setting an explicit date by which Portland Harbor specific fish consumption advisories will be lifted.
3. EPA should select an alternative that allows all members of our community to eat fish safely from our river, including woman of childbearing age and children.
4. EPA's cleanup plan should include the heavily contaminated uplands as well as the heavily contaminated river.
5. EPA should do a much better job of addressing environmental justice issues, including reviewing and correcting significant deficiencies in its public engagement strategies for future phases of the Superfund process and delineating strategies for ensuring the jobs, economic benefits and other benefits associated with the Superfund process to the local community and particularly to under served communities that have been impacted by contamination in Portland Harbor.
6. EPA should eliminate the confined disposal facility which would create a permanent toxic waste dump in our river.

Come on now - Natural resources is what makes Oregon special and supports the economy reliant on tourists.

Would you like to have toxic waste where you live, work, and play?

Thank you.

Sincerely,

(b) (6)

Gresham, OR 97080
